

PHYTOTOXKIT ACCESSORIES PACKAGE

This package is not included in the Phytotoxkit and has to be ordered separately.

The Phytotoxkit accessories package contains small items for easy test preparation, which can be used permanently.

The package contains the following items :

- a round (12 cm diameter) metal sieve of 2 mm mesh, provided with a handle, for sieving the soils prior to use for the tests.
- a 100 ml graduated polypropylene beaker for measurement of the volume of soil (80 cm³) to be put in the test plates and for determination of the water saturation volume of the soils.
- a 50 ml graduated polypropylene cylinder for determination of the water saturation volume of the soils.
- a metal spatula with a 4 cm blade and a handle, to spread the soil samples evenly in the lower compartment of the test plates and to flatten the soil surface.
- a 50 ml synthetic syringe with needle to hydrate the soil samples inside the test plates.
- a 5.5 cm spherical wooden pestle to facilitate sieving of the test soil
- a 3 cm diameter flat plastic pestle to compact sieved soil in the beaker
- a pair of plastic tweezers for easy transfer and positioning of the seeds on the paper filter in the test containers
